

THE OUTBOUND ENGINE PLAYBOOK

How To Build An AI Team That Never Misses A **Signal**

Find it. Qualify it. Reach out.
Let a human sign off. Learn from what happens.

Swipe to see how it works →

THE SIGNAL

Find It, Then Qualify It

An opportunity is only useful if it's caught early and judged fast.

- 1 Scan every source on a fixed schedule, not on demand
- 2 Score each one against the ideal profile, free of charge
- 3 Drop what isn't worth chasing before any money is spent

 **The gate before spend is what makes the budget last.**

THE APPROACH

Research It, Then Write It

Every message earns the right to land in someone's inbox.

- 1 Confirm it's the right size and fit before spending a credit
- 2 Find the real decision maker, a verified contact, not a guess
- 3 Draft the message from that specific signal, never a template

 **Personalized beats bulk, every single time.**

THE LOOP

Send It, Track It, Learn From It

Nothing goes out blind, and nothing that happens gets wasted.

- 1 A human reviews every message before it ever sends
- 2 A reply routes to a person within the hour, not the next day
- 3 Every result feeds back, so next week starts sharper than this one

Ship small, watch the numbers, let the system compound.

**Built to notice the
signal everyone else scrolls past.**

Comment SIGNAL for the breakdown

Built with Claude for judgment, Clay for enrichment, and a sender tool for delivery
